Spanish (native) · English · Italian

PROFILE

Product engineer who builds and ships complete products end to end, with AI as a core part of the development workflow. As founding engineer and CTO of a travel tech startup, I built nearly the entire platform (web app, backend, integrations and now mobile apps), taking it from zero to a live product with paying users. In parallel I lead AI product builds for clients: multi-tenant chatbot platforms, RAG assistants and multi-channel commerce systems. Years of marketing engineering give me something most developers lack: I understand acquisition, conversion and what the business needs from the product. Background in journalism and digital humanities; I communicate clearly with technical and non-technical teams. Remote since 2018.

EXPERIENCE

CTO & Founding Engineer · Travel Smarter (UK) — June 2025 to present · Remote

Travel loyalty optimization platform (miles, points and status) for frequent flyers.

- Built approximately 99% of the product as the main and, today, only developer: architecture, frontend, backend, data model and integrations.
- Launched in January 2026: 2,000+ registered users and 150 paying subscribers on a $99 annual plan; the platform supported ~$150k in investment.
- Migrated from a Next.js monolith to a separate frontend and NestJS backend to support scale and partner integrations.
- Building the iOS app in React Native, Expo and TypeScript (build, signing and release with Xcode), with Android to follow from the same codebase.
- Flight search on Duffel and Amadeus APIs, Stripe subscriptions, Supabase auth and Postgres, a versioned public API with OpenAPI/Swagger, an AI module (Anthropic, OpenAI), interactive maps (Mapbox, deck.gl) and i18n.
- Staging and production pipelines on Vercel with quality gates: type checks, linting, unit and E2E tests (Vitest, Playwright, MSW), secret scanning, Semgrep, dependency rules, dead-code and duplication checks; Sentry monitoring.
- Partner integrations: white-label booking (RateStella) and a distribution partnership with a travel platform reaching ~1M users.
- Defined engineering processes (merge ownership, ticket-based workflow, review of AI work); hired developers and designed the technical assessment for a lead developer role.
- Company selected for Plug and Play Travel & Hospitality, Batch 22 (Silicon Valley accelerator, Fall 2026).

Stack: Next.js, TypeScript, NestJS, Supabase (Postgres), Stripe, Vercel, React Native, Expo, Claude and Codex agents.

Freelance Software & AI Engineer — 2021 to present · Remote

Clients in the UK, EU, Middle East and Latin America.

Brightlily AI (Dubai) · AI products, lead engineer

- **Conversawith**, a multi-tenant AI chatbot platform: embeddable website widget plus an admin console where businesses configure their assistant, knowledge, leads, bookings and analytics.
  - Python/FastAPI backend with real-time WebSocket chat, LangChain orchestration across OpenAI, Anthropic and Gemini, and widget-scoped RAG over a Firestore vector store.
  - AI media engine: auto-tagging, captions, transcripts and embeddings for images and video, with multi-signal scoring to suggest relevant media in conversation.
  - Lead capture and appointment booking with email notifications, NPS and HubSpot sync; migrated from Railway and Supabase to Google Cloud Run and Firebase; Playwright, Vitest and pytest suites.
- **Bella**, a Spanish-first AI assistant for aesthetic treatments and clinic discovery in Peru (beta.bella.pe): Next.js on Cloudflare Workers with D1 and Drizzle, Claude grounded on a verified knowledge store, passwordless login, clinic owner portal and audited super-admin.

Scotspeed (UK) · e-commerce automation, ~2 years

- Architected a Python system managing €3M+ annual GMV across eBay, Amazon and Shopify; 10,000+ orders per month with automated fulfillment; cut operational overhead by 50% while the business grew from €1M to €3M.
- Building the **Master Processor**: one platform on the Amazon SP-API, eBay, Shopify and Temu APIs. Order intake from every store, SKU matching against ~100,000 reference SKUs, production files, barcodes and tracking upload; bulk product uploads and image updates with rollback, cross-channel stock and pricing, and K-type vehicle compatibility repair. TypeScript monorepo (Turborepo, NestJS, Next.js, MongoDB).

I2B Technologies (Chile) · AI tools and web platforms

- **AI SEO Assistant**: multi-brand console for SEO, SEM, content and analytics. FastAPI and React, PostgreSQL, Docker on Cloud Run with Cloud SQL and Secret Manager, Bitbucket CI with security scanning. Integrates Search Console, Ads, keyword providers and WordPress; AI recommendations are grounded only on real evidence.
- Rebuilt the corporate website as an Astro and NestJS monorepo with shared Zod schemas and secure lead intake.
- Clínica Indisa: GTM server-side tracking, migration from Cloud Run to AWS, Cloudflare proxy and server-to-server conversion deduplication with the booking platform.

Analytics and attribution · MYCS (Germany), Dentaly (France) and others

- Meta Conversions API to recover iOS 14+ attribution (+35% accuracy); custom GTM tracking and automated reporting for 5 countries.
- Multilingual Looker Studio dashboards for 5 markets; OpenAI chatbot (500+ queries per month); SEO automation tools; SQL optimization.

Content & SEO/SEM Manager · I2B Technologies

2017 to 2021 · Santiago, Chile

- Led an 8-person cross-functional team; grew organic traffic from 0 to 50,000+ monthly sessions in year one; managed a €500k+ annual budget across Google Ads and Meta; moved the company to a modern MarTech stack.

SKILLS

Product engineering: TypeScript, Next.js, React, NestJS, Node.js, Postgres/Supabase, REST and OpenAPI, Stripe, React Native and Expo

AI: production development with AI coding agents (Claude, Codex); LLM products with OpenAI, Anthropic and Gemini; LangChain, RAG, vector search, embeddings, real-time chat

Backend and data: Python, FastAPI, WebSockets, Flask, Pandas, SQL, data pipelines, marketplace APIs (eBay, Amazon, Shopify)

Infrastructure and quality: Vercel, Google Cloud Run, Firebase, AWS, Cloudflare Workers, Docker; CI/CD, Playwright, Vitest, pytest, Sentry

Growth and analytics: GA4, GTM client and server side, Meta CAPI, Looker Studio, attribution, SEO/SEM

EDUCATION

Master's in Digital Humanities, University of Bologna (2021 to 2023)
BA Journalism and Hispanic Literature, Pontificia Universidad Católica de Chile (2009 to 2015)
